Personal Projects

Dart Scoreboard <https://wralith.github.io/dart-scoreboard/>

As its name indicates, the purpose of this project is keeping the score of the game with minimal interaction with the app while we are playing darts!

- ↳ Compact UI created with **`Mantine`**.
- ↳ State management within **`React`** without additional libraries.
- ↳ Type safe, minimal component designs.

Repeat Meal <https://wralith.github.io/repeat-meal/>

- ↳ Type safe state management thanks to **`Typescript`**, **`React`** and **`Zustand`**. Well-structured one nested object that shapes the entire menu, can be easily separated into fragments and stored in an additional database, also a history object that holds the last 10 meals.
- ↳ Colorful and responsive design created with **`Mantine`**.

Mirket <https://github.com/wralith/mirket>

Demo social media system builded with microservice approach, services communicate with **protobufs** via **gRPC**.

- ↳ Api-Gateway implemented with **`Echo`** framework act as a reverse proxy that consumes proto from services and sends json to client.
- ↳ Each service read and write from their own databases -**Postgres**- with **SQL** queries generated with the **Sqlc** library of **Go**.

Open Source

I translated part of the documentation of **`pnpm`** into Turkish.
I translated all of the tutorials on the **`Solid.js`** official website.

Education

Dokuz Eylul University / International Relations
